--- Kurs:
        Name:   ETBIZ - Exam ETZ-210
        Dauer:  01.Oktober 2026 - 21.Oktober 2026

=== Question 1:

    You are evaluating a system that monitors
        the location, movement, status,
    and behavior of your fleet vehicles.

$>  Which type of system are you evaluating?

Option 1:
    Telematics

Option 2:
    Telemetry

Option 3:
    DCS

Option 4:
    Data dashboard

=== Question 2:

$>  A database schema is an example of which type of data model?

Option 1:
    Conceptual
Option 2:
    Logical
Option 3:
    Physical
Option 4:
    Distributed

=== Question 3:

You work for a hospital that wants to identify patients
who are likely to be re-admitted.
You have a dataset that includes health information
for patients that have been treated by the hospital in the recent past.
This dataset indicates whether or not each patient was re-admitted.

$>  What type of AI learning would be most appropriate
    to predict the likelihood of new patients
    being re-admitted to the hospital?

Option 1:
    Deep learning

Option 2:
    Reinforcement learning

Option 3:
    Supervised learning

Option 4:
```

```
    Unsupervised learning

=== Question 4:

$>  Which of the following data science related roles
    is primarily responsible for the design of data-management systems?

Option 1:
    Data analyst

Option 2:
    Data architect

Option 3:
    Database administrator

Option 4:
    ML engineer

=== Question 5:

$>  Which of the following is an example of transactional data?

Option 1:
    Information extracted from a CRM database.

Option 2:
    Information derived from a Twitter account.

Option 3:
    Information gathered automatically from industrial equipment.

Option 4:
    Information that tracks visits to a web page.

=== Question 6:
$>  Which of the following is an example of generative AI?

Option 1:
    A system that can generate electricity effectively
    and safely for large-scale operations.

Option 2:
    A system that can produce a new,
        more advanced AI model that retains some properties of the original model.

Option 3:
    A system that takes a user's text-based input and
        creates a unique image from it.

Option 4:
    A system that can listen to an audio file of a
    song and identify the name of the song.

Question 7:

$>  Which of the following are feasible methods for
    upholding fairness
    and non-discrimination in data science projects?
    (Choose two.)

```

```
Option 1:
    Scrub all data that contains information pertaining
        to race, gender, creed, and other protected attributes.

Option 2:
    Address disparities in how specific groups of people are
    represented in the data.

Option 3:
    Minimize the reinforcement of stereotypes within the data.

Option 4:
    Avoid the use of public data.

=== Question 8:

$>  Which of the following business goals is most important for
    an AI solution to meet?

Option 1:
    Solving a specific problem

Option 2:
    Achieving digital transformation

Option 3:
    Improving operational efficiency

Option 4:
    Gaining customer approval

=== Question 9:

    A company sells an exercise machine that connects
        to the company's cloud services,
    enabling customers to track their exercise sessions,
    "compete" against other customers, and
    download customized workout plans.
    In return,
        the company obtains useful data on how the machine is used and
    when it requires maintenance or service parts.

$>  Which of the following terms describes the business model
    the company is using?

Option 1:
    Planned innovation

Option 2:
    Planned obsolescence

Option 3:
    Telematics

Option 4:
    Connected services

=== Question 10:

$>  Which of the following aspects of a dataset is NOT
        provided to an unsupervised learning algorithm?

Option 1:
    Examples

```

```
Option 2:
    Labels

Option 3:
    Features

Option 4:
    Test data

=== Question 11:

$>  In which of the following IoT lifecycle phases should you first consider
        how to properly deal with the confidential data held
    in the system in order to
    maintain the privacy of all users whose data is in the system?

Option 1:
    Plan

Option 2:
    Design

Option 3:
    Integrate and Test

Option 4:
    Dispose

=== Question 12:

$>  Which of the following are examples of biases that could
        egatively affect a machine learning model's training?
    (Choose two.)

Option 1:
    Using training data that focuses too heavily on the behaviors of a specific gender.

Option 2:
    Using training data that was generated by asking leading questions in
    a survey.

Option 3:
    Using training data that only represents a sample of the population.

Option 4:
    Using training data whose features are not all useful
    in predicting the label.

=== Question 13:

    A device supports two types of communication:
        using lightweight protocols for local communication and
        using normal protocols
            (such as TCP/IP with Transport Layer Security [TLS])
    for Internet communication.

$>  Which of the following devices is most likely to be configured this way?

Option 1:
    IoT gateway

Option 2:
    IoT device

Option 3:
```

```
    End-user client computer

Option 4:
    Sensor device

=== Question 14:

$>  What type of analytics answers the question, "What has happened?"

Option 1:
    Predictive analytics

Option 2:
    Descriptive analytics

Option 3:
    Historical analytics

Option 4:
    Prescriptive analytics

=== Question 15:

$>  Which of the following are examples of data cleaning?
    (Choose three.)

Option 1:
    Fixing typos

Option 2:
    Scraping web pages

Option 3:
    Removing duplicates

Option 4:
    Removing formatting

Option 5:
    Appending new data

=== Question 16:

$>  Which of the following are essential
    "ingredients" of IoT?
    (Choose three.)

Option 1:
    Sensors

Option 2:
    Actuators

Option 3:
    Battery power

Option 4:
    Network

Option 5:
    Artificial intelligence

=== Question 17:

```

```
$>  Which of the following terms describes a sensor device in a remote location
    that takes measurements and transmits them
    for monitoring and analysis at a central location?

Option 1:
    Telemetry

Option 2:
    Smart pig

Option 3:
    Data dashboard

Option 4:
    Telematics

=== Question 18:

$>  What is the process of updating existing datasets called?

Option 1:
    Munging

Option 2:
    Analyzing

Option 3:
    Cleaning

Option 4:
    Appending

=== Question 19:

    Your organization wants to develop an AI that will recommend
        products to online shoppers.

$>  Which of the following features would be most appropriate
        in helping the AI make its recommendations?
    (Choose two.)

Option 1:
    The shopper's sentiment toward the organization.

Option 2:
    The shopper's sentiment toward a product.

Option 3:
    The shopper's purchase history.

Option 4:
    The shopper's name and address.

=== Question 20:

$>  Which of the following scenarios requires the use
        of AI in natural language processing (NLP)?

Option 1:
    A user submits text to the program,
    and the program determines the overall mood the text.

Option 2:
    A user speaks their name to the program,
    and the program repeats what the user said in a digitized voice.

```

```
Option 3:
    A user submits text to the program,
    and the program determines the reading level of the text.

Option 4:
    A user submits text to the program,
    and the program highlights words that are misspelled.

=== Question 21:

$>  Which of the following technologies is designed to detect cracks,
    defects, and corrosion inside a pipe using magnetic and
    ultrasound detection?

Option 1:
    Smart pig

Option 2:
    Telematics

Option 3:
    RFID

Option 4:
    BLE

=== Question 22:

$>  Which of the following components within an industrial
    control system
            is often located in remote locations,
    where it primarily monitors and controls remote assets
    and supports telemetry functions?

Option 1:
    RTU

Option 2:
    DCS

Option 3:
    PAC

Option 4:
    PC

=== Question 23:

$>  Which of the following is the most important ability for a
    machine learning algorithm to have?

Option 1:
    Its ability to make useful predictions.

Option 2:
    Its ability to process large datasets.

Option 3:
    Its ability to cull noisy (irrelevant) data.

Option 4:
    Its ability to make decisions quickly.

=== Question 24:
```

```
512
513   $>  Which of the following are considered benefits of data science?
514       (Choose two.)
515
516
517   Option 1:
518       Reducing data breaches
519
520   Option 2:
521       Identifying the target audience
522
523   Option 3:
524       Ensuring data privacy
525
526   Option 4:
527       Detecting fraudulent activity
528
529
530   === Question 25:
531
532   $>  Which of the following data science benefits is most closely related
533       to customer loyalty systems?
534
535
536   Option 1:
537       Enhancing customer experience
538
539   Option 2:
540       Mitigating operational risk
541
542   Option 3:
543       Detecting fraudulent behavior
544
545   Option 4:
546       Identifying the target audience
547
548
549
550   === Question 26:
551
552   $>  Which of the following data science use cases are commonly
553           associated with the sales and marketing function?
554       (Choose two.)
555
556
557   Option 1:
558       Self-service support via chatbots
559
560   Option 2:
561       Targeted advertising
562
563   Option 3:
564       Campaign optimization
565
566   Option 4:
567       Talent acquisition
568
569
570
571   === Question 27:
572
573   $>  Which of the following industries would most likely utilize demand
574       prediction as a use case?
575
576   Option 1:
577       Transportation and logistics
578
579   Option 2:
580       Finance and economics
581
582   Option 3:
583       Manufacturing
584
```

```
Option 4:
    Healthcare

=== Question 28:

$>  Which of the following is an example of how
    a clustering model can help you perform targeted marketing?

Option 1:
    You determine the number of customers in Cluster A that should receive Campaign A,
    and likewise for the other clusters.

Option 2:
    You extract the label from each cluster that indicates
    which campaign is most appropriate for which cluster.

Option 3:
    You analyze the features of customers in each cluster and look for commonalities
    with which to build a customer profile.

Option 4:
    You evaluate the rank of each cluster and use that to prioritize how much money to
    spend on campaigns that target each cluster.

=== Question 29:

$>  Which of the following cybersecurity concerns are generally
        more applicable to IoT devices than to client computers,
        cloud services, and IoT gateways?
    (Choose three.)

Option 1:
    Because they need to conserve energy,
    they may have minimal encryption capability.

Option 2:
    Because they often rely on wireless connections,
    they may be subject to communication jamming.

Option 3:
    Because they store large amounts of data, they are valuable targets.

Option 4:
    Because they are often mobile or located in remote locations,
    it may be challenging to provide them with physical
    protection from attackers.

Option 5:
    Because they process personal data,
    they are subject to strict data-protection regulations.

=== Question 30:

$>  Which of the following terms describes a production system
    that automates measurement and
    analysis functions so the system itself can determine just in time
    when maintenance or repair is needed,
        possibly prioritizing those tasks over other
    tasks that are scheduled to be performed?

Option 1:
    Proactive maintenance

Option 2:
    Prescriptive maintenance

```

```
655   Option 3:
656       Preventive maintenance
657
658   Option 4:
659       Predictive maintenance
660
661
```
