INTRODUCTION TO LINUX

- Linux is open source operating system.
- It was developed from UNIX by Linus Torvalds.
- One can use linux os free of cost unlike window.
- It run on most of the platforms like computer, mobile, server and so on.
- It is very powerful and comes in different size and flavours.
- One can run linux os even without installing in computer from either CD/DVD or from pendrive

LINUX FLAVORS

LINUX COMES IN MAINLY TWO TYPES OF FLAVORS

1. DEBIAN based
2. REDHAT based

LINUX ADVANTAGES OVER WINDOW

- Linux is free unlike window.
- One has multiple options based on size, features and GUI distribution unlike window.
- One can test OS even without installing it directly from USB or CD/DVD
- For development purpose, linux os is much better than window
- One does not have to worry about viruses, malware and other.
- One does not have to buy MS-office, open source MS-office like tools is available.

SCOPE

- There is a vast market for embedded linux engineer.
- Now a days a lots of companies are moving their product design to linux.
- It is because of free and opensource nature of linux and also there is a vast community support along with continuous development.

EXAMPLES

- Just look in your house, and you will be amazed to see that some of the high end product what you are using is based on embedded linux os.
- For example, smartphone, smarttv, router, tablet, and so on.
- All your android based device are based on embedded linux customized to fit android on top of it as GUI frontend.

Thanks
