LINUX TERMINAL

TERMINAL VS CONSOLE

- There is a fundamental difference between console and terminal.
- We will look into both and try to understand the fundamental difference between the both.

TERMINAL

- It is the command line interface just like window cmd.
- A terminal window, also referred to as a terminal emulator, is a text-only window in a graphical user interface (GUI) that emulates a console.

Terminal
qemu@qemu-VirtualBox: ~/rpi
qemu@qemu-VirtualBox: ~/rpi/rootfs
qemu@qemu-VirtualBox: ~/rpi
qemu@qemu-VirtualBox: ~/rpi
qemu@qemu-VirtualBox:~/rpi$ ls
cmd.txt notes qemu-rpi-kernel rootfs
qemu@qemu-VirtualBox:~/rpi$ pwd
/home/qemu/rpi
qemu@qemu-VirtualBox:~/rpi$

CONSOLE

- Console is purely cli window where you do not have control apart from running commands, programs or script purely in text mode.
- Console is quite common in most of the embedded linux os, where you do not have GUI access at all.
- You can not use mouse cursor.
- You do not have scrolling feature supported in it.

Ubuntu 16.04.5 LTS qemu-VirtualBox tty1

qemu@qemu-VirtualBox:~$ pwd
/home/qemu
qemu@qemu-VirtualBox:~$

SWITCHING B/W TERMINAL AND CONSOLE

- In Normal linux distribution too, you can switch from GUI mode to cli mode, then have access to console.
- Use the commands (CTRL + ALT + F1-6) to enter into console mode.
- Using commands (CTRL + ALT +F7) you can go back to GUI mode, then you have access to normal linux terminal as usual.
