

Git Grundlagen

Kursheft

Kapitel 5: Branching

git

DATAMICS
machine intelligence consulting services

Video #1 – Branching

falls du das Projekt noch nicht geklont/geforkt hast kannst du das von hier machen:

git clone https://github.com/datamics/football

cd football

git fetch

git pull

git status

git checkout main

Video #2 – Branch erstellen

pwd

git checkout -b feature-abc-12-Userlogin

git branch feature-abc-12-Userlogin & git checkout feature-abc-12-Userlogin

echo "Mein neuer Code..." > user_login.py

git commit -m "abc-12: neuer user login" user_login.py

git status

git log

Video #3 – Branch wechseln (hotfix)

ls

git status

git checkout main

ls

git checkout -b hotfix

git branch

vim Dockerfile

Füge ein Kommentar hinzu

git commit -m „fix docker file“ Dockerfile

Video #4 – Branch merge (hotfix)

git branch

ls

cat Dockerfile

git checkout main

cat Dockerfile

git merge hotfix

cat Dockerfile

git branch -d hotfix

git branch

git push origin main

Video #5 – Branch merge (feature)

git checkout feature-abc-12-Userlogin

echo „Neue Codezeile …“ >> user_login.py

cat user_login.py

git status

git commit -a -m "abc-12: Erweiterung des user login"

git checkout main

git merge feature-abc-12-Userlogin

git branch -d feature-abc-12-Userlogin

git branch

git log

git push origin main

Video #6 – Challenge Merge

git clone https://github.com/datamics/flair.git

cd flair

git branch

```
git branch -a
git checkout hotfix
git branch
git diff main hotfix
git checkout main
git merge hotfix
git branch -d hotfix
git log
```

```
git merge origin feature-101
git branch -d feature-101
git log
git branch
```

```
git push origin main
```

```
git push origin --delete feature-101
```

Video #7 – git merge conflict

```
git checkout -b feature-abc-13-Docker
```

vim Dockerfile # 2. Feature docker file

git commit -a -m „acb-13: feature dockerfile“

cat Dockerfile

git checkout main

cat Dockerfile

vim Dockerfile # 2. Fix Docker

git commit -m „fix docker file“ .

cat Dockerfile

git merge feature-abc-13-Docker

git status

vim Dockerfile # 2. Feature und Fix Dockerfile

git add .

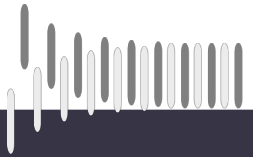

git commit

git status

git branch –d feature-abc-13-Docker

git branch

Video #8 – Challenge Merge KONFLIKT

git clone https://github.com/datamics/flair.git

cd flair

git branch

git branch -a

git checkout feature-13

git branch

git diff main feature-13

git checkout main

git merge feature-13

git status

vim predict.py

git add .

git commit

git status

git branch -d feature-13

git push origin --delete feature-13

git log

git push origin main

Video #9/10 – git rebase

Teil 1:

pwd

git fetch

git pull

git status

git checkout main

git checkout -b feature-abc-20-Experiment

echo "Mein neuer Code..." > experiment.py

git commit -m "abc-20: neues Experiment„ experiment.py

git status

git log

ls

git status

git checkout main

git branch

vim gfootball/replay.py

Füge ein Kommentar hinzu

git commit -m „fix example usage“ gfootball/replay.py

Teil 2:

git checkout feature-abc-20-Experiment

git rebase main

git checkout main

git merge feature-abc-20-Experiment

git branch

git branch -d feature-abc-20-Experiment

git push origin main

Video #11 – git stash

git status

echo "Änderung für das stash Beispiel" >> datei_1.txt

git stash # git stash save

vim README.md

git commit -m „fix readme“ .

git stash apply

git commit -m „Fertig mit den stash Änderungen“ .

git stash list

git stash drop

git stash list
